

ELIPSE

Advanced Burning Control

Elipse is a safe, innovative and exceptional product which sets new standards for the tomorrows garden torches today!

Elipse is the first generation of completely new and advanced garden torches, which uses the advantages from our patent pending "ABC" technology and is equipped with extra innovative features.

Elipse is equipped with a new system for direct refilling of lampoil, so you can avoid needing to touch the torch when refilling. There is no longer a risk of dirt and oil on clothing and hands!

Elipse has no lid and is one unit and can therefore not be opened. This fact combined with the patent pending automatic closing system reduces the risk for oil spill to a minimum in the case the torch should fall over.
